- **Resolution**

Overview

(Percent Complete as of 28 Apr 04)

Issues, Impact and Resolution

- **Issue:** SR03 Block 10b Discrepancy

- **Impact:** Block 10B online in a SF 30 modification to a non-SF33 award is showing the effective date of the base award, however block 10B in the printed copy is showing the release date of the base award.

- **AMS Resolution:** A site experiencing this discrepancy in dates populated in block 10B will need to contact the SPS Help Desk for a two-part script. This issue has been corrected in v4.2 Increment 2 SR02 in that SF 30 modifications created against non-SF 33 awards correctly display the conformed copy effective date in block 10B of the on-line, printed and print preview documents.

- **AFCIS Recommendation** – Sites add a statement to SF 30 "Due to a software malfunction, the date reflected in Block 10B of this modification is incorrect. The correct date is reflected on the basic task/delivery order as shown in Block 3 (Date of Order/Call) of the DD1155 or Block 3 (Award/Effective Date) of the SF1449."

Issues, Impact and Resolution

- **Issue:** Viewing Multiple Documents
- **Impact:** In the upgrade from v4.1e to v4.2 Inc 1 capability to view online contracts while opened in Word has been removed. PD2 review sheets can not be annotated simultaneous to having contract open in Word.
- **AMS Resolution:** If a critical issue for the Air Force, this be defined as a requirement and submitted through the JRB process.
- **AFCIS Recommendation**: Use external review sheets outside of PD2 and then attach to the contract.

- PD2 v4.2 Increment 1 requires an exit function of open Word document prior to viewing an online document.
- This capability was not viewed as correct from a technical development standpoint and was updated for v4.2 Increment 1.
- The dll within v4.2 Increment 1 requires that the word document be exited prior to continuing. This was done in order to make sure that the blob data is saved in the database correctly. The PD2 product is not a multithreaded system and therefore one process must be completed prior to another.
